

Assessing ER to Determine Applicability of Type B ED Codes

- Each ER must be individually assessed
- Is there a physically separate area from the main ER that is not open 24/7 days a week where ER patients are treated?
- Is this area physically separated from the main ER that is open 24/7 by a wall or other barrier that is closed off from the main ER space even if it can be “opened”?

Even if yellow desk operates less than 24/7, since total area is shared – likely all visits billable as Type A

Since yellow area is physically separated by wall or other barrier, if yellow area is not 24/7, likely billed as Type B
